INQUIRIES

- *for further information about this publication*, contact the Assistant Director, Area Classification, on Canberra (02) 6252 5888 or any ABS State office.
- *for information about other ABS statistics and services*, please refer to the back of this publication.

PREFACE

This publication is the last in a three volume set of statistical geography publications relating to the 1996 Census of Population and Housing and completes the 1996 edition of the Australian Standard Geographical Classification (ASGC). It lists the Urban Centres and Localities which have been determined on place of enumeration counts from the 1996 Census and provides details of the criteria used in their delimitation.

The first volume in the set, *Statistical Geography: Volume 1 — Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0) is the main classification used by the Australian Bureau of Statistics for the collection and dissemination of geographic statistics. The second, *Statistical Geography: Volume 2 — Census Geographic Areas, Australia* (Cat. no. 2905.0) provides information about Census Geographic Areas which are not included in the ASGC, such as State and Commonwealth Electoral Divisions, Postal Areas and State Suburbs, but are used in disseminating 1996 Census statistics.

The date of effect of the Urban Centres and Localities is 6 August 1996, the date on which the 1996 Census was conducted.

W. McLennan
Australian Statistician

CHAPTER 1

INTRODUCTION

PURPOSE OF THE ASGC

The main purpose of the ASGC is for collecting and disseminating geographically referenced statistics. The ASGC is a hierarchical classification system consisting of six interrelated classification structures. It provides a common framework of statistical geography and thereby enables the production of statistics which are comparable and can be spatially integrated.

There are six interrelated structures in the ASGC. They are:

- Main Structure;
- Local Government Area Structure;
- Statistical District Structure;
- Statistical Region Structure;
- Urban Centre/Locality Structure; and
- Section of State Structure.

Each of these structures serves a specific purpose and is individually discussed in *Statistical Geography: Volume 1 — Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0). However, because the Urban Centre/Locality Structure of the ASGC cannot be finalised until after census processing is completed, the listing of the Urban Centres and Localities determined from the 1996 Census is being presented in this separate publication.

SPATIAL UNITS

The various geographical areas, or spatial units, which build the different classification structures in the ASGC are as follows:

- Collection District (CD);
- Statistical Local Area (SLA);
- Statistical Subdivision (SSD);
- Statistical Division (SD);
- State and Territory (S/T);
- Statistical District (S Dist);
- Local Government Area (LGA);
- Statistical Region Sector (SRS);
- Statistical Region (SR);
- Major Statistical Region (MSR);
- Urban Centre and Locality (UC/L); and
- Section of State (SOS).

During population census years, the smallest spatial unit used in the ASGC is the CD. It is the basic building block of the six classification structures. Between censuses, the smallest spatial unit is the SLA. Thus for those years when a census is held, all the above spatial units are defined. In intercensal years, all units except CD, UC/L and SOS are defined.

All ASGC spatial units are individually explained in *Statistical Geography: Volume 1 — Australian Standard Geographical Classification (ASGC)* (Cat. no. 1216.0). The spatial units that form the Urban Centre/Locality Structure of the ASGC are also explained in the following chapter.

SUMMARY OF UC/Ls IN THE UC/L STRUCTURE, 1996

<i>Spatial units</i>	NSW	Vic.	Qld	SA	WA	Tas.	NT	ACT	OT	Aust.
UC/L	524	314	348	152	168	99	52	2	3	1 662

DEFINITION OF AUSTRALIA

Following the incorporation of Christmas Island and Cocos (Keeling) Islands into geographic Australia (by the *Territories Law Reform Act, No. 104, 1992* which amended the *Acts Interpretation Act 1901*), these two territories were included in the ASGC from 1 July 1993. Other external territories (such as Norfolk Island) remain excluded. In addition, the treatment of Jervis Bay Territory (an internal territory) in the ASGC changed from 1 July 1993.

Jervis Bay Territory was previously included with the Australian Capital Territory for statistical purposes because of its administrative association with the Australian Capital Territory and because its relatively small size prevented it from meeting confidentiality requirements for separate statistical output. Following the granting of self-government to the Australian Capital Territory in May 1989, the situation was reviewed and from the 1 July 1993 edition of the ASGC, Jervis Bay Territory, along with the Territory of Christmas Island and the Territory of Cocos (Keeling) Islands, formed part of a new category, Other Territories, at the State/Territory level.

—

CHAPTER 2

URBAN CENTRE/LOCALITY STRUCTURE

PURPOSE

The UC/L Structure groups CDs together to form defined areas according to population size criteria. The resulting areas are known as Urban Centres or Localities. Place of enumeration counts from the latest Census of Population and Housing are used to define the UC/L Structure which means this classification structure is only current at the time of the Census. Both the Urban Centre and the Locality spatial units are made up of one or more contiguous CDs. As the UC/L Structure relates to CDs within defined areas only, the structure, in aggregate, does not cover all of Australia.

The UC/L Structure is used for the production of standard ABS statistical outputs from population censuses such as *Selected Social and Housing Characteristics for Urban Centres and Localities* (Cat. nos 2016.0 – .7), *CDATA96* (Cat. nos 2019.0.30.001 – .8.30.001), and *Community Profiles* (Cat. nos 2020.0 – .9).

The UC/L Structure is separate from the Main Structure because:

- the boundaries do not generally coincide with SLAs and the higher level spatial units in the Main Structure; and
- its total area covers only part of Australia.

THE STRUCTURE

The UC/L Structure is defined at population census times only. It comprises in ascending hierarchical order:

- CDs;
- Urban Centres/Localities.

CDs within this structure are confined to those within defined Urban Centre and Locality boundaries. As a consequence, Urban Centres and Localities aggregate to cover only part of a State or Territory and thus the structure covers part of Australia only.

Urban Centres may be bisected by a S/T boundary. Where this occurs each portion of the urban centre is separately identified and is included in the Urban Centre/Locality structure for the relevant S/T. For example, the urban centre of Albury-Wodonga is partly in New South Wales and partly in Victoria. One part is shown under New South Wales and the other under Victoria.

Urban Centres and Localities are delimited by the use of actual population counts after each census is conducted. This means that while the other ASGC structures can be finalised and reported in the ASGC manual with an effective date of 1 July, the UC/L Structure can only be reported after population counts are available, usually in the year following the Census.

Example:

Code	Name
S/T	UC/L

3 QUEENSLAND

00100	Agnes Water (L)
00200	Airlie Beach

THE STRUCTURE continued

In this table, Urban Centre and Locality names are alphabetically listed and UC/L codes are arranged in ascending numerical order within each S/T. An (L) is shown after Locality names to distinguish Localities from Urban Centres.

Listings of component CDs of Urban Centres and Localities are available from all ABS offices (see contact list at back).

COLLECTION DISTRICT (CD)

CDs are designed for use in census years for the collection and dissemination of population census data. In non-census years, CDs are undefined. In aggregate, CDs cover the whole of Australia without gaps or overlaps.

The CD is the smallest spatial unit in the ASGC. CDs aggregate to form the larger spatial units of SLAs in the Main, Statistical Region, Statistical District and LGA Structures, SOS in the SOS Structure and Urban Centres and Localities in the UC/L Structure. Aggregation of SLAs in turn forms the remaining spatial units in the ASGC. Therefore, in census years, the CD is the common denominator which integrates all six classification structures in the ASGC.

The basic concept of a CD is that it defines an area that one census collector can cover, delivering and collecting census forms in about a ten-day period. In urban areas CDs average about 220 dwellings. In rural areas the number of dwellings per CD reduces as population densities decrease. By design, CD boundaries do not cross SLA (and therefore LGA) boundaries.

For the 1996 Census, 34,500 CDs were defined throughout Australia.

Delimitation of CDs

For the 1996 Census, the following criteria were used for delimiting CDs:

- CDs should be consistent with both the collector's workload requirements and their role as a useful spatial unit and building block capable of aggregation into broader level ASGC spatial units;
- the area and population delimited by a CD boundary must not be so great that one collector cannot deliver and collect census forms within about ten days;
- the chosen CD boundaries should, if possible, be readily identifiable on the ground, be defined in terms of permanent features, follow the centre of a road or river if these features are used and should delimit CDs which conform to existing and proposed land uses. The use of major roads as CD boundaries in rural areas should be avoided where possible, i.e. to minimise splitting of identifiable rural localities;
- CDs should conform where possible to existing/gazetted suburb boundaries. CDs must not cross SLA boundaries and, as a consequence, any other ASGC spatial unit boundary;
- CDs should not be designed in such a way as to make them confidential for publication of data. Accordingly, a CD should contain, where possible, at least 100 persons at the next census. For dissemination purposes, Indigenous Community CDs will have a limit of 80 persons; and
- CDs in aggregate must cover the whole of Australia without gaps or overlaps.

Special purpose CDs	<p>Special purpose CDs are created so that special enumeration procedures can be applied. They include:</p>
	<ul style="list-style-type: none"> ▪ Indigenous Community CDs; ▪ Defence Establishments CDs; ▪ Mining or Construction towns or camps CDs; and ▪ Major Waterways CDs.
	<p>A number of these special purpose CDs have no clearly defined boundary. They are represented as points instead of areas on maps.</p>
	<p>Indigenous Community CDs are defined where there is a significant Indigenous population.</p>
	<p>Defence Establishments CDs are defined where there is a clear boundary and special enumeration procedures are required.</p>
	<p>Mining or Construction CDs are defined when the town or camp is expected to exist for at least two censuses.</p>
	<p>Major Waterways CDs consist of water only and contain no population. They are found particularly in major urban areas where an LGA boundary extends from the shore to include part of a body of water.</p>
Off-shore, shipping and migratory CDs	<p>Off-shore, shipping and migratory CDs are not spatial units in the usual sense — they have no defined boundaries. They are designed to facilitate the recording of people on census night who are off-shore on oil rigs, drilling platforms and other structures; on board vessels in and between Australian ports; or are in transit on board long-distance trains, buses and aircraft.</p>
	<p>Off-shore, shipping and migratory CDs are not defined for the Australian Capital Territory and the Other Territories.</p>
	<p>For the 1996 Census, Australian residents temporarily in Antarctica are included in the off-shore, shipping and migratory CDs of Tasmania.</p>
URBAN CENTRE/LOCALITY	<p>In broad terms, an Urban Centre is a population cluster of 1,000 or more people while a Locality is a population cluster of between 200 and 999 people. For statistical purposes, people living in Urban Centres are classified as urban while those in Localities are classified as rural.</p>
	<p>Each Urban Centre/Locality has a clearly defined boundary and comprises one or more whole CDs. Urban Centre/Localities are redefined at each population census.</p>
Delimitation of Urban Centres and Localities	<p>The delimitation criteria for UC/Ls are based on those developed in 1965 by Dr G.J.R. Linge from the Australian National University. The criteria that are currently in force have been adopted and subsequently amended by the Conference of Statisticians of Australia in 1965 and 1969 and the Review of ABS Statistical Geography in 1988.</p>

*Delimitation of Urban Centres
with 20,000 or more people*

The criteria are as follows:

- Each Urban Centre with a population of 20,000 or more is to consist of a cluster of contiguous urban CDs and other urban areas. The criteria for classifying CDs as urban include the following:
 - All contiguous CDs which have a population density of 200 or more persons per square kilometre shall be classified as urban. Consequently State, SD, LGA and other administrative boundaries shall be disregarded in determining whether a CD should be included within the Urban Centre.
 - A CD consisting mainly of land used for factories, airports, small sports areas, cemeteries, hostels, institutions, prisons, military camps or certain research stations shall be classified as urban if contiguous with CDs which are themselves urban.
 - A CD consisting mainly of land used for large sporting areas, large parks, explosives handling and munitions areas, or holding yards associated with meatworks and abattoirs shall be classified as urban only if it is bordered on three sides by CDs which are themselves classified as urban.
 - Any area which is completely surrounded by CDs which are urban must itself be classified as urban.
 - Where an Urban Centre of 20,000 or more population is separated from another urban area by a gap in urban development of less than three kilometres (by the shortest railway or road distance), the gap shall be bridged by classifying a connecting CD as urban, and therefore treating the urban areas as one. If the gap is three or more kilometres (and whether or not it is comprised mainly of reserved land or a natural barrier) the urban areas shall remain separate.
 - Any area included in an Urban Centre in 1971 or thereafter under the provisions of these criteria shall continue to be included, unless the population of the Urban Centre falls below 20,000, in which case these criteria will cease to apply.
 - If a CD was incorrectly included (for whatever reason) in a Linge area at a previous census, then it should be excluded at the next census unless it now meets the criteria.
 - Large peripheral CDs in growth areas may be fragmented; and insofar as the availability of visible boundary features allows, the fragments so created shall be as near square-shaped as possible, contain at least 100 persons at the next census and be of such a size that they will contain a collector's workload when fully developed. For the purpose of delimiting Urban Centres such fragments shall be regarded as CDs.

Delimitation of Urban Centres with 1,000 to 19,999 people

- Each Urban Centre with a population between 1,000 and 19,999 is to be delimited as follows:
 - The Urban Centre shall be delimited subjectively by the inspection of aerial photographs, by field inspection and/or by consideration of any other information that is available.
 - All contiguous urban growth is to be included (even if this would not necessarily occur if the density criterion were applied), together with any close but non-continuous development which could be clearly regarded as part of the Urban Centre. However, for urban centres which contain a population approaching 20,000 the objective criteria applied for urban centres with 20,000 people should also be considered.

Delimitation of Localities

- Localities are to be delimited as follows:
 - All population clusters of less than 1,000 population and whose population is expected to reach 200 by the next census are to be examined for boundary delineation.
 - The following criteria must be satisfied before a boundary is drawn around a Locality. It must:
 - contain a non-farm population of at least 200 people but not more than 999 by the next census;
 - have a minimum of 40 occupied non-farm dwellings with a discernible urban street pattern; and
 - have a discernible nucleus of population.
 - If there is some doubt that a Locality will reach the minimum population of 200 people then a boundary should still be drawn around the Locality.
 - Where, in the case of defence camps, construction camps, etc. it is anticipated that the cluster will not exist at two consecutive censuses, these camps should not be bounded.
 - The Localities shall be delimited subjectively, by the use of the latest available aerial photographs, by field inspection and/or by consideration of any other information that is available.

Subjective guidelines

Guidelines for the drawing of subjectively determined UC/L boundaries are as follows:

- Wide rather than narrow boundaries are to be used to ensure inclusion of all urban or built-up areas. Some rural area can be included in an Urban Centre, if necessary, to ensure that the boundary encompasses all the urban area. However, this guideline should be interpreted in the light of the ones that follow.
- Continuity of urban development is a major consideration. Boundaries are not to be thrown very wide just to include some small non-contiguous area or urban development. (The Linge criterion of three kilometres may be of assistance in this respect in larger Urban Centres of say greater than 10,000–15,000 population.)

Subjective guidelines
continued

- Where the subjective boundaries decided upon are contained within a municipal boundary and the remaining area or population is small, the municipal boundary is to be used.
- For previously bounded cities, towns or localities the boundaries are not to be changed lightly. Comparability is to be maintained with the past unless there are significant exclusions (either due to faulty boundaries at the previous census or subsequent development).
- When considering urban land usage, recognition should be given to approved plans.
- Topographic boundaries must be used wherever possible when they are consistent with the above guidelines.

UC/L name and code

When Urban Centres cross S/T boundaries, the separate portions of the Urban Centre are uniquely identified and reported in their relevant S/T. UC/Ls are identified by a five-digit code which is only unique within each State/Territory. Use of UC/L codes in conjunction with S/T codes, is necessary before these codes become unique across Australia.

Example:

S/T	Code	Name
	UC/L	
1		NEW SOUTH WALES
	00800	Albury-Wodonga (Albury Part)
2		VICTORIA
	00400	Albury-Wodonga (Wodonga Part)

The special purpose codes 00000 and 99999 are reserved as Rural Balance and Off-Shore and Migratory codes, respectively, for each S/T.

State and Territory (S/T)

Six States and five territories are recognised in the ASGC: New South Wales, Victoria, Queensland, South Australia, Western Australia, Tasmania, Northern Territory, Australian Capital Territory, Jervis Bay Territory, and the external territories of Christmas Island and Cocos (Keeling) Islands.

These spatial units are political entities with fixed boundaries. Except for the last three mentioned territories, the total area of each S/T, including their off-shore islands, is used for statistical purposes as a separate spatial unit in the ASGC. Jervis Bay Territory, and the Territories of Christmas Island and Cocos (Keeling) islands are included as one spatial unit at the S/T level under the category of Other Territories.

In aggregate, S/Ts cover Australia without gaps or overlaps.

S/T code S/Ts are identified by unique one-digit codes within Australia as follows:

Code	S/T
1	New South Wales
2	Victoria
3	Queensland
4	South Australia
5	Western Australia
6	Tasmania
7	Northern Territory
8	Australian Capital Territory
9	Other Territories

This coding order has been used in the ABS and other organisations as a standard, for many years. The order was reviewed when Western Australia displaced South Australia as the fourth most populous State. Citing the Commonwealth Table of Precedence, which adopted a revised listing such that any textual material having protocol significance should list Western Australia before South Australia, some users requested the code for Western Australia be changed to 4 and South Australia to 5. For the ASGC however, the above order was maintained to ensure historical continuity, to reduce potential errors in data handling and interpreting, and to avoid costs associated with changing existing systems.

CHAPTER 3

URBAN CENTRE/LOCALITY CODE LISTS

This chapter presents the codes and names of all urban centres and localities which were defined from the 1996 Census of Population and Housing. They are effective at 6 August 1996.

Localities are identified by the suffix (L). For S/T listings please see:
